This book constitutes the refereed joint proceedings of the 4th International Workshop on Computer Assisted and Robotic Endoscopy, CARE 2017, and the 6th International Workshop on Clinical Image-Based Procedures: Translational Research in Medical Imaging, CLIP 2017, held in conjunction with the 20th International Conference on Medical Imaging and Computer-Assisted Intervention,

MICCAI 2017, in Québec City, QC, Canada, in September 2017. The 7 full papers presented at CARE 2017 and the 10 full papers presented at CLIP 2017 were carefully reviewed and selected. The papers deal with interventional and diagnostic endoscopy integrating the latest advances in computer vision, robotics, medical imaging and information processing and the development and evaluation of new translational image-based techniques in the modern hospital. Accompanying DVD-ROM, in pocket at front of v. 1, contains ... "video clips referenced in the text."--DVD-ROM label. Difficult Conditions in Laparoscopic Urologic Surgery outlines potential situations faced by those using laparoscopy and provides solutions for difficult conditions. Extensively and thoroughly written by experts in the field, Difficult Conditions in Laparoscopic Urologic Surgery enables the practising surgeon to confront and resolve dilemmas before even having entered the operating theatre. In this book, every urologic procedure is described using a step-by-step sequence of events and the text is supplemented with numerous tips, colored illustrations and high definition photographs depicting the main steps of the procedures. With a problem-oriented approach, Difficult Conditions in Laparoscopic Urologic Surgery is a valuable reference source for residents, fellows and general urologists. This book aims to provide readers with the latest information on application of hysteroscopy in diagnosis and treatment of gynaecological diseases. The first chapters systematically review current status, equipment and instruments, applied anatomy, preoperative treatment and anesthesia for hysteroscopic surgery. In the following chapters, details in

aspect of hysteroscopy from diagnostic to hysteroscopic surgery are explained with clinical cases. After that, advanced techniques in hysteroscopy combined with laparoscopy and ultrasound monitoring hysteroscopic surgery are introduced with high-resolution illustrations. Written by experts with wealthy experience in the field, this book will be a valuable reference for gynecologists at hysteroscopy units, reproductive units, gynecological and oncological units.

Principles of Airway Management, 4th Edition, reviews the essential aspects of airway management: anatomy, equipment, intubation, fiberoptic endoscopy, surgical approaches, intubating LMA (lightwand), pediatric airway, CPR, and mechanical ventilation. The book features well-balanced discussions of the complexities and difficult issues associated with airway management; excellent organization that ensures the material can be learned and applied to various situations; the latest equipment and techniques; summary boxes which highlight the most important points of each chapter; and more than 400 illustrations (many in color, for the first time), tables, and boxes. Here is an atlas, not a conventional textbook. It guides urologists step by step through EERPE, enabling them to confidently and successfully perform this highly standardized technique. Every stage of the procedure is presented with numerous accompanying endoscopic images and diagrams so that practitioners can fully grasp and follow each individual surgical step. Complications and their management are described in detail. Provides in-depth, clinical reviews on Gastric Cancer, providing actionable insights for clinical practice. This book covers all aspects of narrow band imaging (NBI), including research, general principles and diagnostic features in various ENT pathologies. In addition to highlighting the advantages of NBI over white light endoscopy for the detection of early cancers and lesions that are less than 1 cm in diameter, the book offers a step-by-step approach to help readers easily grasp various pathologies of the upper aerodigestive tract. It discusses both malignant and non-malignant aspects of NBI and provides extensive information on inflammatory lesions of the upper aerodigestive tract, including various clinical features of laryngopharyngeal reflux. Subsequent chapters cover the most difficult aspects of NBI in treated mucosa (post-chemo radiated), in which the potential recurrence of disease is a key question. It also addresses the limitations of NBI, including false positive and false negative cases. Given its scope, the book will benefit otolaryngologists, oncosurgeons, radiation oncologists and oral medicine practitioners, as well as graduate students of ENT, radiotherapy, oral medicine and oncosurgery. Previous edition won First Prize in the Gastroenterology category of the 2008 BMA Medical Book Competition High-resolution

endoscopy and narrowband imaging have revolutionized the field. Edited by a gastroenterologist with a reputation for delivering outstanding material, this new edition of an award-winning atlas provides you with an outstanding collection of images, videos, and expert diagnostic guidance to enhance your decision making. To accelerate your learning, Dr. Cohen offers more than 2000 endoscopic images, emphasizing conditions for which NBI is particularly useful – such as finding dysplasia in Barrett's mucosa, and diagnosing adenomatous colon polyps – and providing exceptional preparation for the future of endoscopy practice, with a broad new look at normal and abnormal findings throughout the GI tract. The book is divided into three main parts: The basics of NBI Clinical applications of NBI Atlas of 1600 color images, broken into sections on the pharynx and esophagus, stomach, small intestine, and colon, including correlating histopathology and multiple examples of key pathologies The accompanying website features more than 85 video clips containing over 3 hours of annotated video, to give you a complete sense of how HRE and NBI work and look in real time, including during therapeutic procedures. All of the over 1000 new images appear in much brighter color, reflecting the advance in scope technology since the first edition. New chapters have been added to present the data supporting increased use of NBI in optical diagnosis and in the context of therapeutic procedures. For the first time, brilliant images of the bile duct and pancreas are included as the imaging revolution has expanded to reach these new locations. This spectacular new imaging modality promises to enhance endoscopic decision making in real

time, facilitate therapeutic maneuvers, make tissue sampling more precise, and make resection of mucosal neoplasia more complete. Expertly guiding you through the latest advances, this book facilitates your mastery of the field, and provides an up-to-date reference for gastroenterologists and endoscopists to improve their practice. This issue presents a concise clinical overview on the most current knowledge on advanced imaging modalities. Dr. Ananadasabapathy has secured internationally recognized authors to write articles on endomicroscopy, molecular imaging, optical coherence tomography, and chromoendoscopy. Articles are also devoted to imaging the biliary tree and red flag technologies in gastric neoplasia. This high-yield reference book focuses on the clinical, technical, and pathological aspects of endobronchial ultrasound-guided transbronchial needle aspiration (EBUS-TBNA). Its reviews cover all aspects of EBUS-TBNA, including the clinical perspective, technical aspects of the procedure, and cytomorphology of common and uncommon entities, as well as highlights diagnostic challenges. Each chapter features a multitude of full-color high-resolution images and includes key references to the current literature in the field. Additionally, reference tables and informative figures highlight the salient points. The book is unique in that it is written by experienced thoracic surgeons, pulmonary medicine physicians, and cytopathologists who use EBUS-TBNA in a large medical center. This publication is of interest to individuals learning and practicing cytopathology, in addition to clinicians practicing pulmonary/thoracic medicine or surgery. In short, it provides important pearls of wisdom to create a

comprehensive reference for all physicians involved with EBUS-TBNA. *Principles and Practice of Interventional Pulmonology* provides a comprehensive text covering all aspects of Interventional Pulmonology. Providing both pathophysiologic background as well as illustrated and clear instruction on how procedures ought to be performed, this text will be of great value to interventional pulmonologists, thoracic surgeons, surgical oncologists, and interventional radiologists. This is the first of four volumes that together offer an authoritative, in-depth reference guide covering all aspects of the management of oral cancer from a multidisciplinary perspective and on the basis of a strong scientific foundation. This volume, on tumor biology, epidemiology, etiology, emerging role of cancer stem cells and prevention of oral cancer, opens by discussing oral carcinogenesis in general and the role of particular carcinogens and human papillomavirus. Global epidemiology and changes in disease prevalence are then addressed. Up-to-date information is provided on emerging cancer biomarkers, and the biologic basis of personalized therapy is explained. Histopathological features of malignant and premalignant neoplasms and their relevance to management are described. Further chapters focus on the current status of chemoprevention, the management of oral submucous fibrosis, and the value of various diagnostic adjuncts. The volume concludes by critically evaluating the efficacy of oral screening methods. Volume 1: Biology, Epidemiology, Etiology, and Prevention Volume 2: Diagnosis and Management Volume 3: Oral and Maxillofacial Reconstructive Surgery Volume 4: Rehabilitation and

Essential for residents preparing for a case, surgeons seeking management tips, and surgeons preparing for board recertification, Sugarbaker's Adult Chest Surgery features a logical organization based on anatomy, and each section has an overview chapter summarizing the relevant anatomy, pathophysiology, and diagnostic and procedural options. Operations and diagnostic procedures are highlighted throughout the book in succinct, illustrated technique

chapters. Endoscopic Therapy is emerging as the preferred therapy for early neoplasia in Barrett's Esophagus. This volume provides the key decision making factors in determining endoscopic therapy for an individual patient. All current techniques and complications of ET are provided including, photodynamic therapy (PDT), APC, multipolar electrocoagulation (MPEC), RF, ER, and cryotherapy. Each technique includes "how to highlights", high quality color endoscopic images, line drawings and diagrams. Endoscopic imaging modalities to detect dysplasia, decision making in the clinical arena and cost-effectiveness of ablation are some of the additional topics discussed in this highly practical volume. Written by experts in the field of endoscopic therapy, this text educates GI practitioners and researchers about this under-utilized approach to the treatment of Barrett's Esophagus. This book attempts to improve algorithms by novel theories and complex data analysis in different scopes including object detection, remote sensing, data transmission, data fusion, gesture recognition, and edical image processing and analysis. The book is directed to the Ph.D. students, professors, researchers, and software developers working in the areas of digital video processing and computer vision technologies. Twenty-five years ago, a monograph on gastric cancer was published by the Italian Society of Surgery: that book is recognized as a milestone in the management of these tumors in Italy. Oncological and surgical knowledge in the field of gastric cancer have changed dramatically over the last 25 years. The aim of this book is to offer an essential update on current diagnostic approaches and optimal treatment strategies. It gives

comprehensive information on gastric cancer not neglecting the basic sciences, which can shed light on the carcinogenesis mechanisms involved in this pathology. The principles of tailored and multimodal treatment are examined according to the latest guidelines with the aim of providing a valuable synopsis for clinicians. The book not only reviews what has changed in the field of gastric cancer over the past quarter century but also offers the reader a glimpse of the future by describing the ongoing surgical and oncological trials which focus on new treatment frontiers such as immunotherapy and target therapy. It also seeks to incorporate the latest discoveries based on molecular classifications. Further, the book reflects the findings and experiences of Italian experts belonging to the GIRCG (Italian Research Group for Gastric Cancer) and will offer an excellent guide for oncological surgeons in their daily practice of caring for patients affected by gastric cancer. This book covers all aspects of narrow band imaging (NBI), including research, general principles and diagnostic features in various ENT pathologies. In addition to highlighting the advantages of NBI over white light endoscopy for the detection of early cancers and lesions that are less than 1 cm in diameter, the book offers a step-by-step approach to help readers easily grasp various pathologies of the upper aerodigestive tract. Dr. Kahi has assembled top experts to provide clinically focused articles on colonoscopy and polypectomy. The issue is divided into sections devoted to Technique Fundamentals, Advances in Technique, Technology, Neoplasia Detection, Quality and Outcomes, and The Future. Everyone from early-career gastroenterologists to those late in their career should find this edition to be very valuable. This book constitutes the refereed proceedings of the 6th International Conference, ICISP 2014, held in June/July 2014 in Cherbourg, France. The 76 revised full papers were carefully reviewed and selected from 164 submissions. The contributions are organized in topical sections on multispectral colour science, color imaging and applications, digital cultural heritage, document image analysis, graph-based representations, image filtering and representation, computer vision and pattern recognition, computer graphics, biomedical, and signal processing. Urolithiasis, or stone disease occurs in 7% of women and 12% of men at some point, and these statistics are rising. Furthermore, for those who form a stone, the likelihood of a recurrence is nearly 50% within 5 years of initial diagnosis. Therefore, the need for effective, minimally invasive alternatives for stone eradication and prevention is critical. Because stone disease comprises a large part of any urologist's practice, a thorough

knowledge of the pathogenesis and pathophysiology of stone disease is critical in order to understand and implement treatment strategies to prevent stone formation. Likewise, a working knowledge of the surgical treatments, instrumentation and outcomes is necessary to arm patients with sufficient information to make an informed decision and to provide the appropriate treatment modality for a given stone situation. In *Urolithiasis: Medical and Surgical Management*, the authors provide a complete guide to the management of stone disease from both a medical and surgical prospective. This book should be an invaluable resource for those who treat stone disease in any capacity, whether surgically or medically, acutely or long-term.
