This book presents the most current information on the treatment of athletes involved in gymnastics, a multifaceted sport with unique demands on its participants that can lead to a myriad of medical conditions and injury patterns. It opens with an introduction to the history of gymnastics and a brief review of gymnastics disciplines and events. An overview of gymnastics injury epidemiology lays the foundation for the rest of the book. Growth and developmental issues are also discussed in detail, as many young gymnasts train long hours before or during puberty. Concepts related to the biomechanics of gymnastics, common overuse and acute musculoskeletal injuries, psychological issues, concussions, as well as rehabilitation and return-to-play principles round out the presentation. Throughout, there is the emphasis that young athletes are not simply small adults, and that they have unique needs and considerations for evaluation and treatment. Written and edited by experts in the field, some of whom are former gymnasts themselves, *Gymnastics Medicine* covers all of the relevant information on evaluation, management and return-to-play for sports medicine physicians, advanced practice providers, physical therapists, athletic trainers, exercise scientists, and mental health professionals. The scope will encompass the initial triage of a patient with a mangled upper or lower extremity, the initial and subsequent reconstructive efforts, to include skeletal fixation, vascular and soft tissue reconstruction, muscle and tendon transfers, psychological impact, therapy requirements, amputation considerations, and current data on salvage versus amputation in these scenarios. Case examples will be included to add further depth and context to the techniques and recommendations provided. Presenting these surgical challenges in detail, *The Mangled Extremity* will be an ideal resource for orthopedic and trauma surgeons, residents and fellows, as well as emergency surgeons facing these intense, traumatic injuries.

The evaluation of IT and its business value are the subject of many academic and business discussions. Investments in IT are growing extensively, and business managers worry about the fact that the benefits might not be as high as expected. This phenomenon is often called the IT investment paradox or the IT Black Hole: large sums are invested in IT that seem to be swallowed by a large black hole without rendering many returns. How to measure the benefits of IT is the concern of this book titled *Information Technology Evaluation Methods and Management*. The different IT evaluation approaches and methods are discussed and illustrated with cases: traditional financial evaluations such as the return on investment, information economics and the recently introduced IT Balanced Scorecard. The latter approach is proposed as an ideal mechanism to support the IT/business alignment process and its related IT governance process. Among some of the topics included in this book are: software measurement; ERP project evaluation; strategic electronic commerce evaluation. Get a quick, expert overview of the many key facets of lung cancer evaluation and management with this concise, practical resource by Drs. Lynn T. Tanoue and Frank Detterbeck. This easy-to-read reference presents a summary of today's best evidence-based approaches to diagnosis and management in this critical area. Covers diagnosis and evaluation, treatment considerations, and comprehensive care options for patients with lung cancer. Provides insight on evidence for today's best practices, as well as future directions in the field. Consolidates today's evidence-based information on the clinical aspects of lung cancer into one

convenient resource. This book explores the domain of software maintenance management and provides road maps for improving software maintenance organizations. It describes full maintenance maturity models organized by levels 1, 2, and 3, which allow for benchmarking and continuous improvement paths. Goals for each key practice area are also provided, and the model presented is fully aligned with the architecture and framework of software development maturity models of CMMI and ISO 15504. It is complete with case studies, figures, tables, and graphs. Most manuals currently available emphasize either M and E or Evaluation. Here is a primer with a significant difference. If you are already an expert or still a neophyte with a strong urge to improve your skills including those who have always wanted to know but feared asking, here is a manual for you that is unique, inclusive, and practical in several extraordinary ways. The primer covers a range of concepts, illustrations and real life cases studies. The vignette on the cover is a comprehensive example of what it is all about. The handbook leads the reader from a program management life cycle to strategic frameworks to a model designed by the author on performance indicators quality control including case studies. It has been implemented in Asia and Africa with an oral presentation made at a Canadian Evaluation Conference in Toronto, Canada. The real life cases include basic and advanced studies like randomized control trials using a quasi experimental design conducted during one of the author's evaluation assignments. The data management systems (DMS) section follows the same approach above with a framework that includes all the relevant DMS components including sections on basic statistics complemented with illustrations and more real life case studies. Concepts, illustrations, and cases cover statistical means, sampling protocols and student tests among others. This volume works towards overcoming the lack of systematic impact evaluation in higher education, particularly analyses which are not restricted to ex-post gathered data and expert assessments. Since (higher) education is more important than ever in knowledge societies, high priority should be ascribed to quality management (QM) in higher education institutions (HEIs). Consequently, impact evaluation of QM effectiveness is indispensable because it generates the knowledge required for quality (management) improvement. The introductory chapter elucidates the motivation and objective of

impact analyses of QM in HEIs and provides an overview of the volume's other contributions. One chapter reflects on success factors and un-/intended effects of QM, while another one analyses more discursive ways of evidence-informed guidance of QM policies which are complementary to rigorous impact studies. Five chapters investigate QM effectiveness in HEIs by ex-post and simultaneous impact evaluation in European case studies, including assessments of students, teachers, quality managers, and institutional leadership. The case studies comprise universities from Germany, Spain, Finland, and Romania. The final chapter reports a SWOT analysis of impact evaluation of QM in HEIs, which is suggested as a tool for bridging the notorious gap between the demanding methodology of impact evaluation and its proper implementation. This book was originally published as a special issue of the European Journal of Higher Education.

This comprehensive and detailed text deals with the diagnosis and surgery of blepharoptosis, and will benefit any practicing physician, fellow or resident who deals with blepharoptosis. Fully illustrated and enhanced with accompanying video clips, this comprehensive text presents the clinical evaluation and management of brachial plexus injuries and reconstruction, both for adult patients and birth injuries. Divided into two main sections, part one covers adult brachial plexus injuries, discussing the relevant anatomy and biology, epidemiology, and associated injuries. The main focus, however, is on diagnosis - the clinical exam as well as neurodiagnostic and radiographic evaluation - and surgical management approaches and techniques, including nerve grafting and transfers, tendon and muscle transfers, and joint fusion. Related topics are presented in chapters on sensory reinnervation, neuropathic pain management, the role of amputation and prosthetics, and pre- and post-surgical therapy protocols. Brachial plexus birth injury is described in part two, also focusing mainly on diagnosis and management but with an emphasis on the fact that babies are not small adults and special considerations are warranted. This

section concludes with chapters on the management of late complications and long-term sequelae. A comprehensive surgical text on brachial plexus injuries has not been previously attempted. Filling a large gap in the literature, Operative Brachial Plexus Surgery is the go-to resource for adult and birth related brachial plexus reconstruction for orthopedic surgeons, neurosurgeons, plastics surgeons, and their trainees.

W. Edwards Deming's name is synonymous with Total Quality Management. His ideas were at first enthusiastically adopted by Japanese businesses. Deming is recognized as putting Japan on the road to leadership in international business and industry and was awarded the Second Order of the Sacred Treasure by the Japanese Emperor. It was not until the 1970s, however, that Deming started to make an impact in the West. Heads of leading businesses began to consult with him, and an NBC television documentary entitled 'If Japan Can, Why Can't We?' broadened his audience still further. Throughout the 1980s various books were written by others to document and explain his work. His own book Out of the Crisis was published in 1986 and he was awarded the National Medal of Technology in America the following year. In 1987, the British Deming Association was formed to spread awareness of the Deming philosophy. This collection gathers together the key material to enable students and researchers to explore the impact of Deming's ideas. The set includes a new introduction and an extensive annotated bibliography, making this an invaluable research resource.

Craniosynostosis, the early fusion of skull sutures, is a serious abnormality of infancy and childhood. Because there are many forms of the condition, both isolated and syndromic, proper diagnosis is essential before treatment could be carried out. Not only has surgical treatment advanced in recent years, but basic knowledge of sutural and molecular biology of craniosynostosis syndromes has recently come to light. Because dramatic changes have occurred in the field, particularly in molecular biology, this new edition has been rewritten and new chapters have been added on the growth of sutures, craniofacial surgery, and epidemiology and clinical correlations. The molecular basis of craniosynostosis, with emphasis on fibroblast growth receptors, and recent research on postnatal growth and the craniofacial complex, will be discussed in detail. Many new syndromes have been delineated the established conditions have been redefined.

Assessment Centers and Managerial Performance presents the

historical development of multiple assessment procedures with focus on those advances relevant to assessment centers. This book discusses the models of job analysis, the nature of managerial work, work-sampling assessment methods, and the process of human judgment based on the assessment center experience. Organized into 11 chapters, this book begins with an overview of the various methods to describe, evaluate, and predict management effectiveness. This text then describes a number of assessment programs, including the earliest assessment centers. Other chapters consider the five approaches to predicting managerial effectiveness, including psychometric testing, clinical evaluations by psychologists, supervisor's ratings of potentials background interviews, and assessment centers. This book discusses as well the three levels of managerial jobs, namely, supervisory, middle management, and executive. The final chapter deals with the development of standards for assessment center operations. This book is a valuable resource for psychologists. This text provides a comprehensive and state-of-the-art overview of the evaluation and management of liver mass lesions. Major topics covered include epidemiology, the use of different imaging modalities in the differential diagnosis of liver lesions, the use of biomarkers and immunohistochemical stains for diagnosis, and treatment of the different types of liver masses. These include hepatocellular adenoma and hepatocellular carcinoma, fibrolamellar carcinoma, cholangiocarcinoma, hemangioma, focal nodular hyperplasia, liver masses in adult patients with congenital heart disease, and other infectious, inflammatory, and cystic lesions of the liver. The volume presents highly practical case presentations of typical patients seen in a clinical hepatobiliary practice. Written by experts from multiple disciplines, *Evaluation and Management of Liver Masses* is a valuable resource for clinicians and professionals who manage patients with these conditions. The aim of this radiological atlas is to connect pathophysiology to imaging using many illustrations and examples, emphasizing the capabilities and limitations of multidetector computed tomography and its role in the correct management approach to these disorders. Furthermore, the place of allied imaging modalities (plain film and ultrasound) in the clinical algorithm is comprehensively illustrated.
